LakeMind

Lausanne, Switzerland

CO-FOUNDER AND VP OF ENGINEERING

Aug. 2011 – Jun. 2013

- LakeMind makes cloud services more reliable by automatically troubleshooting and repairing service outages. As a result, the duration of service downtimes is drastically reduced and developers spend less time fixing problems.
- LakeMind was an incubating company at EPFL in LABOS and NAL, supported by an Innovation Grant and Venture Kick.
- I designed and implemented the software stack for LakeMind consisting of an event processing pipeline, distributed in-memory dependency graph data structures, and several signal processing and machine learning algorithms. My responsibilities also involved coordinating the software development efforts involving several interns and business development in Europe and the US.
- Cloud service troubleshooting was too early to gain traction in its market segment and we did not attract the venture capital required to develop a minimum viable product. Recently, this market segment has seen significant activity.
- The two co-founders retain full ownership of the Intellectual Property and software developed.

Nokia Research Center

Lausanne, Switzerland

INTERN

Jan. 2011 – Jul. 2011

- Designed and implemented the prototype for a location privacy-preserving service for smartphones, which was a key component in the Nokia-EPFL NIC Trial that took place in 2011 and involved ~ 100 participants for 4 months.
- Demonstrated and published practical attacks on context-based identifier changes in such mobile networks.
